## MAINTENANCE AND CARE

### SINKS

A.S.Helsingö sinks are made with high-quality stainless steel. The steel finish is durable, hygienic and easy to clean.

Use a mild detergent for daily cleaning. To grease stains and speckles of rust, it is best to use an alkaline detergent. Clean the more difficult stains by letting the detergent sit for approximately 15 minutes. After that, work through the sink with a soft sponge or a dishwashing brush with circular motions, rinse thoroughly and wipe dry.

If your sink is undermounted, make sure to clean the gap between the sink and the tabletop regularly. Do not use any abrasive detergents or steel wool, as those might scratch and damage the surface.
